Target Audience

This document is intended for those who are running their own hosting business and they need their services to be synchronized with the latest build/version of HC.

Why Upgrade?

Hosting Controller releases Windows Build07/Linux Build 07. These builds provide fixes for issues which were reported in past few weeks. It is recommended to update HC installation on your machines. Visit [Service Pack](#) section to download latest builds.

Microsoft .Net Framework 2.0 must be installed on your HC server(s) prior to this installation. Moreover, this build removes .NET mappings from the root of the web server as it is not recommended to have .NET mappings on the root of the web server.

Enhancements and Fixes

This build slots in following enhancements and fixes:

Build No 8.00.0007: (Windows)

New Enhancements

- ✓ **Microsoft Hyper-V Support**
 - Microsoft Hyper-V is now supported.
- ✓ **Exchange Server 2010 Support**
 - Exchange 2010 is now supported.
- ✓ **WHMCS 4 Support**
 - WHMCS 4.x is now supported.
- ✓ **Auto Signup**
 - Open source HC AutoSignup is now supported.

Enhancements in Existing HC Modules
